

AUTOCRIB®

Up to 5 auxiliary
units

Modular
design

The AutoCrib® HX Lockers provide secure, controlled access for tools, kits, PPE, electronics, and other high-value or oversized items that are not well suited for traditional vending. Designed for fast and secure access, HX Lockers ensure the right items are available to the right people without slowing productivity. Every transaction is tracked automatically, delivering accountability while keeping daily workflows simple and efficient.

HX Lockers can be deployed as a standalone locker system or as an auxiliary add-on to an HX60 coil machine, giving users flexibility to match their layout and inventory strategy. The system supports up to five connected frames including one main unit and four auxiliary units as capacity requirements change.

Locker compartments can be combined vertically to create larger storage spaces and reconfigured in the field without additional hardware, allowing the system to adapt quickly as inventory requirements change. Together, HX Lockers deliver flexible storage, secure access, and long-term scalability in a single, integrated solution.

HX Locker

SOFTWARE

-  **AutoCrib.net** - Cloud managed portal
-  **Over 100 Standard Reports**
-  **Access Controls** - Reduce consumption by user
-  **Automatically** reorder inventory

FEATURES

Re-Order Automation
With security and accountability

Minimal configuration
Standard design with ability to adjust locker door sizes

Inventory Visibility
Verify inventory levels quickly

10.1" Touchscreen
Convenient user interface

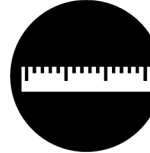

Sync Quickly
Sync data between Arcturus and the machine quickly

Power
115 VAC 60HZ, 2.5A

Proximity Access
Use your prox card access the system

Compact Footprint
30.25" W X 72" H x 25.5" D

Check in/out
Keep track of durable items

12 Month Warranty

INTEGRATION

Directly Integrate into your existing ERP system through the AutoCrib Rest API. This integration eliminates the need for double entry and reduces administrative work. Pricing, employee access, and inventory data can be automatically synchronized between systems to ensure accuracy and consistency. Updates happen in real time, giving your team a single, reliable source for all key information.

**Established integrations with existing customers*
